
COMP2401

Introduction to Systems Programming

Course Notes

Notes by Mark Lanthier (F2020 version)

(based on original slides from Christine Laurendeau and Doron Nussbaum)

Table of Contents

1	Systems Programming and C Basics	1
1.1	Systems Programming and Operating Systems	2
1.2	Tools for Systems Programming	6
1.3	Writing Your First C Program	9
1.4	C vs. Java	13
1.5	Getting User Input	26
1.6	Functions and Procedures in C	33
1.7	Coding Conventions/Style	37
2	Data Representation	43
2.1	Number Representation and Bit Models	44
2.2	Bitwise Operations	59
2.3	Compound Data Types	65
2.4	Strings and <code>char</code> Arrays	65
2.5	Arrays	73
2.6	Custom Type Definitions: Structures and Unions	77
3	Pointers and Memory Management	91
3.1	Pointers	92
3.2	Command-Line Arguments	107
3.3	Memory Management	110
3.4	Dynamic Memory Allocation	118
3.5	Linked Lists	132
3.6	Function Pointers	160
4	Builds and Makefiles	166
4.1	The Compilation Process	167
4.2	Makefiles	178
5	Concurrent Computing	184
5.1	Concurrent Systems	185
5.2	Process Management	189
5.3	Inter-Process Communication	202
5.4	Threads	223
6	Streams and File/Device I/O	238
6.1	Streams and File I/O	239
6.2	Binary File I/O	243
6.3	Text File I/O	246
6.4	File Navigation/Positioning	252
6.5	Buffers	256
6.6	Sources, Sinks and Pipes	259
7	Program Organization	262
7.1	Variable Details and Scope	263
7.2	Libraries	272
8	X11 Windows and Graphics	279
8.1	X11 Windows	280
8.2	X11 Graphics	283
8.3	Simple Animation	290
8.4	Event-Handling	299
9	Scripting	311
