(1) Convert the decimal number 404 to binary, then convert the binary number 0b110110101 to decimal. You must show your work in both cases to get full marks!

(2) Simplify the following logical expression. You must show your work to get credit:

\((\text{NOT} \ (\text{NOT} \ true) \ \text{AND} \ (\text{False} \ \text{OR} \ \text{NOT} \ false)) \ \text{OR} \ (\text{True} \ \text{AND} \ \text{NOT} \ False \ \text{OR} \ False)\)
(3) What does the code to the right print?

```python
def q3():
    a = 10
    b = 2
    c = a - b * a
    if(c < a):
        print(a)
    else:
        print(c)
q3()
```

(4) What does the code to the right print?

```python
def q4():
    a = 0
    while a < 10:
        print(a)
        if a % 2 == 0:
            a = a + 1
        elif a == 6:
            a = a - 1
        else:
            a = a * 2
        print(a)
q4()
```

(5) What does the code to the right print?

```python
def q5(x, y, z):
    for i in range(x, z):
        w = y
        while w > x:
            print(i * w)
            w = w - 1
q5(1, 4, 3)
```
(6) What does the code to the right print?

```python
def q6(a,b,x):
    for i in range(a,b):
        out=x

        for j in range(i,4):
            out = out + "!"
            while out!=x+"!!!":
                print(out)
                out=out+"!"

q6(1,5,"meow")
```

(7) Circle all the mistakes in the following code, and write out the correct code in the space provided (use comments to describe your changes if necessary). The correct code should define a function that takes a number argument, n, and returns the product of all numbers from 1 to n.

E.g. `product(3) → 1*2*3 = 6`

```python
product(n):
    result = 0
    for i in range(1,n):
        result = result * x
    return product
```
Create a function called sumOfSquares() that, given a number n as input, will calculate the sum of the squares of all numbers between 1 and n.
E.g. sumOfSquares(4): $1^2 + 2^2 + 3^2 + 4^2 = 1 + 4 + 9 + 16 = 30$
(For bonus practice try doing this without using the multiplication operator!!)
