
COMP 2401

Introduction to Systems Programming

Course Notes

Notes by Mark Lanthier (F2024 version)

(some material based on slides from Christine Laurendeau and Doron Nussbaum)

Table of Contents

1	Systems Programming and C Basics	1
1.1	Systems Programming and Operating Systems	2
1.2	Tools for Systems Programming	6
1.3	Writing Your First C Program	8
1.4	C vs. Java	12
1.5	Getting User Input	26
1.6	Functions and Procedures in C	31
1.7	Coding Conventions/Style	36
2	Data Representation	42
2.1	Number Representation and Bit Models	43
2.2	Bitwise Operations	57
2.3	Compound Data Types	62
2.4	Strings and <code>char</code> Arrays	63
2.5	Arrays	70
2.6	Custom Type Definitions: Structures and Unions	73
3	Pointers and Memory Management	87
3.1	Pointers	88
3.2	Command-Line Arguments	103
3.3	Memory Management	105
3.4	Dynamic Memory Allocation	113
3.5	Linked Lists	126
3.6	Function Pointers	152
4	Compiling and Runtime Optimization	158
4.1	The Compilation Process	159
4.2	Makefiles	169
4.3	Runtime Optimization	175
5	Concurrent Computing	188
5.1	Concurrent Systems	189
5.2	Process Management	192
5.3	Inter-Process Communication	206
5.4	Socket Communication	212
5.5	Threads	227
6	Streams and File/Device I/O	242
6.1	Streams and File I/O	243
6.2	Binary File I/O	247
6.3	Text File I/O	250
6.4	File Navigation/Positioning	256
6.5	Buffers	259
6.6	Sources, Sinks and Pipes	262
7	Program Organization	269
7.1	Variable Details and Scope	270
7.2	Libraries	278
8	X11 Windows and Graphics	285
8.1	X11 Windows	286
8.2	X11 Graphics	289
8.3	Simple Animation	295
8.4	Event-Handling	304
9	Scripting	317
