
COMP1405/1005

Introduction to Object-Oriented Programming

Course Notes

Notes maintained by Mark Lanthier (2009 version)

Table of Contents

1 Programming Basics	4
1.0 Programming-Related Courses In Computer Science	5
1.1 Understanding Programming	6
1.2 The JAVA Programming Language	10
1.3 Writing Your First JAVA Program	12
1.4 Displaying Information	16
1.5 Getting User Input	21
1.6 Types of Data: Primitives vs. Objects	25
1.7 Making Your Own Objects	30
2 Variables and Objects	34
2.1 Variables	35
2.2 Instance Variables / Object Attributes	42
2.3 Initializing Our Objects By Using Constructors	57
2.4 Shared Data: Static/Class Variables	66
3 Decision Making	73
3.1 Using the IF Statement	74
3.2 The Switch Statement	84
3.3 A Decision Making Example Program	87
4 Defining Your Own Functions / Methods	93
4.1 What Are Methods ?	94
4.2 Defining Methods – Functions	95
4.3 Defining Methods – Procedures	104
4.4 Null Pointer Exceptions	109
4.5 Static / Class Methods	114
5 Calculations, Formatting and Conversions	119
5.1 Calculations and Formulas	120
5.2 Formatting Your Output	126
5.3 Type Conversion	131
6 Loops and ArrayLists	136
6.1 Repeating Code Using For and While Loops	137
6.2 Collecting Objects Together Using ArrayLists	142
6.3 Team/League Example	145
6.4 Car/Autoshow Example	160
7 Organizing Classes To Use Inheritance	176
7.1 Class Hierarchy	177
7.2 Inheriting Attributes	183
7.3 Inheriting Behavior	189
7.4 University Database Example	199

7.5 Abstract Classes & Methods	206
7.6 Defining Interfaces	214
8 Exception Handling	219
8.1 Simple Debugging	220
8.2 Exceptions	222
8.3 Examples of Handling Exceptions	232
8.4 Creating and Throwing Your Own Exceptions	239
9 Proper Coding Style	248
9.1 Protecting and Simplifying an Object	249
9.2 Simplifying Constructors and Eliminating "This"	260
9.3 Type-Casting, Polymorphism and Double-Dispatching	264
9.4 Proper Testing	278
10 Code Efficiency	282
10.1 Exiting Loops Efficiently	283
10.2 Proper Use of Booleans	286
10.3 Enumerated Types	289
10.4 Equality Vs. Identity	292
10.5 Arrays	303
11 Saving and Loading Information	318
11.1 Introduction to Files and Streams	319
11.2 Reading and Writing Binary Data	321
11.3 Reading and Writing Text Data	327
11.4 Reading and Writing Whole Objects	330
11.5 Saving and Loading the Autoshow	334
11.6 The File Class	342
12 Some Useful Tools	346
12.1 The String Class	347
12.2 The StringBuilder & Character Classes	353
12.3 The Date and Calendar Classes	357
12.4 Iterators	362
13 Other Collections	368
13.1 Collection Organization	369
13.2 Example: Bracket Matching	373
13.3 Example: Maze Search	378
13.4 Sorting Objects	384
13.5 Removing Duplicates	391
